DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement has been received and considered.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 4. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over FR publication 2800140 to Barillot ('140) in view of UK patent 2151728 ('728) or Valentin or US publication 20030062764 to Vignotto et al.

Regarding claims 1-10 Barillot '140 discloses in figure 9 a device structurally similar to applicant's as readily apparent from the drawings.

Application/Control Number: 10/539,457

Art Unit: 3683

Lacking is a specific disclosure of applying a layer of "varnish" to the resilient guide means.

However, such varnish coatings are well known in the brake art and have been routinely used as protective or lubrication type coatings to reduce wear and corrosion, reduce noise etc. The references to UK '728 (see abstract and page 2 last paragraph of disclosure), Valentin (see col. 1 lines 53-60) or Vignotto et al. (see paragraph 0006) all clearly teach this known concept.

It would have been obvious to the ordinary skill in the art at the time the invention was made to have provided the "resilient guide means" shown in figure 9 of Barillot with a protective coating of varnish (as broadly claimed) for the reason stated above.

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher P. Schwartz whose telephone number is 571-272-7123. The examiner can normally be reached on M-F 10:30-7:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jim McClellan can be reached on 571-272-6786. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
